

EE776

Insertion Flow Sensor for Compressed Air and Gases DN50 - DN700 (2" - 28")

The EE776 employs the thermal mass flow measurement principle and is suitable for pipe diameter DN50 (2") to DN700 (28"). It is ideal for monitoring and metering compressed air, nitrogen, CO₂ and other non-corrosive and non-flammable gases with a pressure up to 16 bar (232 PSI).

Versatility

The EE776 is available for two measuring ranges 0.2...100 m/s (40...19685 SFPM) and 0.2...200 m/s (40...39370 SFPM) and features various probes for maximum immersion depth 165 mm (6.5"), 315 mm (12.4") and 465 mm (18.3").

Wide choice of outputs

The measured data is available on two outputs, which can be configured as analogue current or voltage, switch or pulse signal for consumption metering. Optionally, the EE776 features also Modbus RTU or M-Bus (Meter-Bus) interface.

Easy and safe mounting

The patented non-return protection combines three functions:

- » Non-return protection: The sensing probe can only slide in one direction during installation. It cannot return (blow out), even if released.
- » Sealing: An encapsulated O-ring avoids leakage when mounting the device under pressure.
- » Precise positioning: The design facilitates the precise positioning of the sensing probe (immersion depth and orientation), which is paramount for high accuracy measurement.

User configurable and adjustable

The USB interface and the free software facilitate the EE776 configuration which includes selecting the measurands and the output signals, uploading the working pressure and the pipe diameter and adjusting the device.

Typical Applications

Measurement of consumption of compressed air

Compressed air counter

Mass flow measurement of industrial gases

Features

Non-return protection for secure mounting

Assembly/disassembly under pressure without flow interruption

Easy and accurate positioning

High accuracy $\pm 1.5\%$ of reading

Factory adjustment under pressure

Pipe diameters DN50 (2") to DN700 (28")

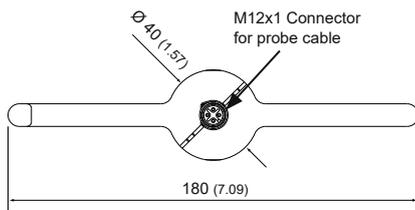

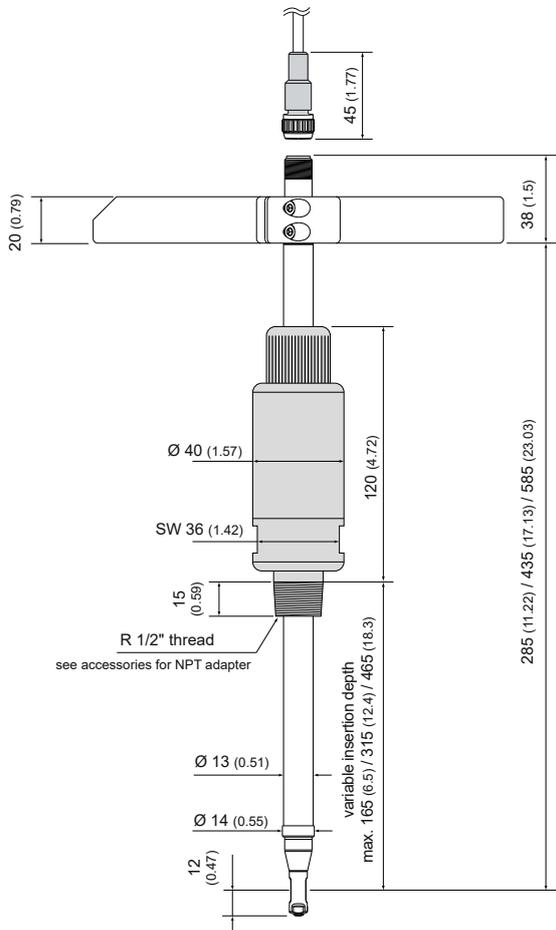

Pressure range up to 16 bar (232 PSI)

Wide measuring range up to 200 m/s (39370 SFPM)

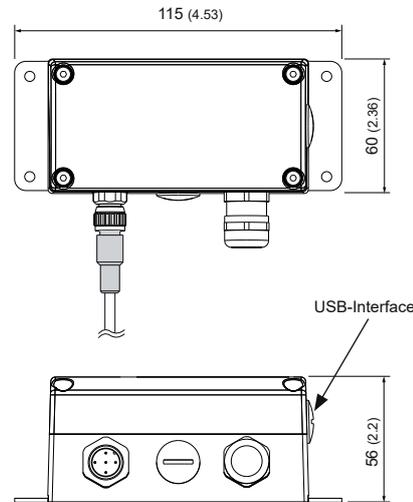

Digital interface for Modbus RTU or M-Bus

1) The accuracy statement includes the uncertainty of the factory calibration with an enhancement factor $k=2$ (2-times standard deviation). The accuracy was calculated in accordance with EA-4/02 and with regard to GUM (Guide to the Expression of Uncertainty in Measurement).

2) Deviating from 20 °C (68 °F)

3) The flow meter is calibrated at 9 bar (130.5 psi) abs. If the working pressure is different from 9 bar (130.5 psi) you can compensate the error by setting the actual pressure with the configuration software.

4) Supported baud rates: 9600, 19200, 38400 and 57600; find more details about communication setting in the User Manual and the Modbus Application Note at www.epluse.com/EE776.

5) Supported baud rates: 600, 1200, 2400, 4800 and 9600; find more details about communication setting in the User Manual.
